DETAILED ACTION

Allowable Subject Matter

1. Claims 1-39 are allowed.
2. The following is an examiner's statement of reasons for allowance: the closest prior art of record was Rickard and Garber. Rickard is directed to a computer-based system for determining opening prices for options in an option exchange where the delta and gamma values are used by options traders. Rickard fails to disclose an *automated* trading system, as in claims 1-39, but relies upon human inputs. The secondary reference Garber is directed to a system and method for linking a rolling spot currency contract with a principle market maker program. Col. 7, line 51-col. 8 line 32 describe an electronic currency exchange served by rolling a spot currency market maker computer. The rolling spot currency maker computer interfaces with an options market maker to buy and sell options to neutralize inventory risk. Garber does not make *automated* buy/sell decisions based on received prices and value calculations. Thus Garber describes trading that involves human interaction, not automated trading. Neither Rickard or Garber, in light of claims relate to automated trading or suggest "decision logic using at least a portion of the received market price information and transaction value to generate a decision whether to submit a response to buy or sell the first traded item." Thus claims 1-39 are allowed over the applied prior art.
